## **DETAILED ACTION**

Claims 1-16 are pending.

## Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9, drawn to a method of generating eukaryotic cells having a modified Rosa26 locus comprising introducing functional DNA into the Rosa26 locus of starting mouse, rat, zebrafish, plant or invertebrate cells, wherein said functional DNA is a gene expression cassette comprising a gene of interest operatively linked to a promoter or is DNA that can be converted into such gene expression cassette; a mouse cell; a method of making a transgenic mouse; and a transgenic mouse.

Group II, claim 10, drawn to a vector defined in claims 1-8 (however, claims 1-8 do not define any vectors).

Group III, claim 11 and 16, drawn to a mouse, rat, zebrafish, plant or invertebrate cell having a modified Rosa26 locus.

Group IV, claim 12-16, drawn to a method of making a transgenic mouse, rat, zebrafish, plant or invertebrate having a modified Rosa26 locus and a transgenic mouse, rat, zebrafish, plant or invertebrate having an operatively functional gene expression cassette integrated into its Rosa26 locus.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The method of claim 1 (being the special technical feature) was known in the art at the time of filing. The specification states:

"WO 99/53017 describes a process for making transgenic animals which ubiquitously express a heterologous gene, wherein the heterologous gene is under the control of a

Application/Control Number: 10/541,683

Art Unit: 1632

ubiquitously expressed endogenous promoter, e.g. that of the mouse Rosa26 locus. R. Dacquin et al., Dev. Dynamics 224.245L251 (2002) and K. A. Moses et al., Genesis.31, 176-180 (2001) utilize the transgenic mouse strain R26R obtained according to WO 99/53017 for the expression of heterologous genes. WO 02/0982:1,7 describes a method of targeting promoter-less selection cassettes into transcriptionally active loci; such as the Rosa26 locus." (pg 3, first full paragraph)

The teachings in the art describe introducing functional DNA operably linked to a promoter into the Rosa26 locus of a mouse cell, which is meets all the limitations in claim 1. Therefore, the special technical feature claimed is not a contribution over the prior art and the claims lack unity.

Upon election of Groups I, III or IV, applicants must elect a single species. This application contains claims directed to the following patentably distinct species: mouse, rat, Zebrafish, plants and invertebrates. The species are independent or distinct because the structures of each are materially distinct and separate. The burden required to search the species together would be undue.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-9 and 11-15 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after

Application/Control Number: 10/541,683

Art Unit: 1632

the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

It is noted that claim 16 is currently generic to Groups III and IV.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Wilson who can normally be reached at the office on Monday, Tuesday, Thursday and Friday from 9:30 am to 6:00 pm at 571-272-0738.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to (571) 272-0547.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance.

Art Unit: 1632

Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.

For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199.

If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Peter Paras, can be reached on 571-272-4517.

The official fax number for this Group is (571) 273-8300.
